# On the place of Lithuanian in the typology of aspectual systems

#### Peter Arkadiev

Institute of Slavic Studies of the Russian Academy of Sciences / Russian State University for the Humanities / Sholokhov Moscow State University for the Humanities,

peterarkadiev@yandex.ru

**Aspect** is a grammatical system expressing the "different ways of viewing the internal temporal constituency of a situation" (Comrie 1976: 3).

Languages differ as to which (if at all) aspectual meanings are grammaticalised, which of them form oppositions and which are grouped together, and how they are expressed.

(Comrie 1976, Maslov 1984, Dahl 1985, Smith 1991, Bybee et al. 1994)

"Two-component" theory of aspect:

**Viewpoint** aspect: particular ways in which the speaker construes the situation and relates it to other situations in the discourse.

VS.

**Actionality**: partly lexically encoded and partly syntactically determined linguistic categorisation of situations.

(Smith 1991, Breu 1994, Bertinetto & Delfitto 2000, Tatevosov 2002)

Actionality: categorisation of situations as static vs. dynamic, durative vs. punctual, telic vs. atelic etc.

Viewpoint aspect: roughly, construal of situations as **perfective** (bounded, included into the reference time) vs. **imperfective** (unbounded, overlaping with the reference time).

	Perfective	Imperfective
Telic	John read the book	John was reading the book
	Иван прочитал книгу	Иван читал книгу
	Jonas <mark>perskaitė</mark> knygą	Jonas <mark>skaitė</mark> knygą
Atelic	John slept	John was sleeping
	Иван поспал	Иван спал
	Jonas <mark>pamiegojo</mark>	Jonas miegojo

Since the introduction of the term *veikslas* by Jablonskis (1922) it has been assumed that most Lithuanian verbs may be characterised as "imperfective" (eigos veikslas) or "perfective" (jvykio veikslas), though the status of this opposition has been subject to considerable debate (Dambriūnas 1960, Galnaitytė 1962, 1963, 1978, Ambrazas 1999, Wiemer 2001, Arkadiev 2009, 2011, 2012).

The opposition of "aspects" in Lithuanian is lexical-sematic rather than grammatical:

 The "aspect" of a verb can only be determined on the basis of the interpretations of its tense forms, since there are no grammatical (morphosynytactic) features robustly associated with each of the "aspects".

 "Perfectivisation" by means of verbal prefixes (preverbs) and especially "imperfectivisation" with the suffix -inė- are not fully productive and regular, being in various ways restricted by the lexical semantics of individual verbs, as well as by stylistic considerations and codified norm.

- "Neutralisation" of aspects attested in many contexts in the East Slavic languages and witnessing the obligatory grammatical nature of aspectual opposition, is not found in Lithuanian.
- The class of "biaspectual" (*dviveiksliniai*) verbs showing behaviour characteristic of both "aspects" is large and comprises many frequent lexemes.

Nevertheless, the differences between Lithuanian and Russian (and other Slavic languages) in the domain of aspect are those of degree rather than of kind.

Even if the aspectual opposition in Lithuanian is not grammatical in the narrow sense of this word, it exists and should be compared with its counterparts in other languages.

Together with Slavic and a number of other languages of Eastern Europe (Latvian, Hungarian, Yiddish, Ossetic, Georgian), Lithuanian shows a type of aspectual system which is called bounder-based perfectives by Bybee & Dahl (1989), Bybee et al. (1994), as opposed to anterior-based perfectives.

bounder-based perfectives	anterior-based perfectives
go back to combinations of verbs with adverbial elements	go back to resultative-perfect constructions
tend to be derivational	tend to be inflectional
show lexical idiosyncrasies and often add meanings other than perfective	tend to be semantically compositional
emphasize completion of the event and not just temporal boundedness	express temporal boundedness of an event

Bounder-based perfectives themselves constitute a subtype of aspectual systems which can be called **derivational** (Dahl 1985) or **verb-classifying** (Plungian 2011).

(see Arkadiev 2014, 2015, Arkadiev & Shluinsky 2015)

#### Derivational aspectual systems:

- aspectual interpretation is an inherent property of the verbal lexeme;
- in order to apply a different viewpoint to the same situation, a new verb has to be derived by morphological means.

perfectivisation

VIPF → VPFV

skaityti 'read' →
perskaityti 'read

through'

imperfectivisation

 $VPFV \rightarrow VIPF$ 

*įrodyti* 'prove' → *jrod<mark>inė</mark>ti* 'argue'

 Being a separate lexeme, an aspectual derivate displays a full verbal paradigm, and not just some particular form or forms:

	'write (ipf)'	'write (pfv)'
Present	raš <b>o</b>	<b>pa</b> raš <b>o</b>
Preterite	raš <b>ė</b>	<b>pa</b> raš <b>ė</b>
Habitual Past	raš <b>ydavo</b>	<b>pa</b> raš <b>ydavo</b>
Future	raš <b>ys</b>	<b>pa</b> raš <b>ys</b>

 The absence of a particular derivational marker does not necessarily signal a particular aspectual meaning:

```
vesti 'lead' (ipf)
mesti 'throw' (pfv)
```

Derivational aspectual systems are opposed to **inflectional** ones where verbal lexemes by themselves are aspectually neutral and combine with grammatical markers indicating particular aspectual meanings.

Spanish escribir 'write'

San Juan escribió el Apocalipsis.

'Saint John wrote (aorist, PST:PFV) the Apocalypse.'

Mientras San Juan escribía el Apocalipsis...

'When Saint John was writing (imperfect, PST:IPFV) the Apocalypse...'

 Lithuanian allows the use of the Present tense of "perfective" verbs in habitual and narative contexts (praesens historicum).

Kas vakarą išgeria butelį konjako. (LKT) 'Every evening he drinks a bottle of brandy.'

 By this feature Lithuanian differs from Russian and Polish, but is similar to Czech and Slovene:

Cz: Vypije(PFV) jednu skleničku vodky denně.

Pol: Codziennie wypija(IPF) / \*wypije(PFV) kieliszek wódki.

'He drinks a glass of vodka every day.'

The same in Latvian, Yiddish and Hungarian.

 Lithuanian differs from most Slavic languages in that it allows "perfective" infinitives to co-occur with phasal verbs (Holvoet 2014):

Lith Vaikas pradeda užmigti.

Pol Dziecko zaczyna zasypać(IPF) / \*zasnąć(PFV).

'The child is beginning to fall asleep.'

 However, (standard) Slavic languages turn out to be unique in this ban on perfective infinitives with phasal verbs: Latvian, Yiddish, Hungarian and Kartvelian languages do not have this restriction, just as Lithuanian.

 Like Slavic languages and Ossetic, but unlike Latvian, Hungarian, Yiddish and Kartvelian languages, Lithuanian has morphological secondary imperfectivisation:

```
skaityti 'read' →

perskaityti 'read through' →

perskaitinėti 'read through repeatedly'
```

Secondary imperfectivisation in Lithuanian is lexically restricted and not very productive, but Slavic languages also differ widely in the productivity of this process (Petruxina 2000).

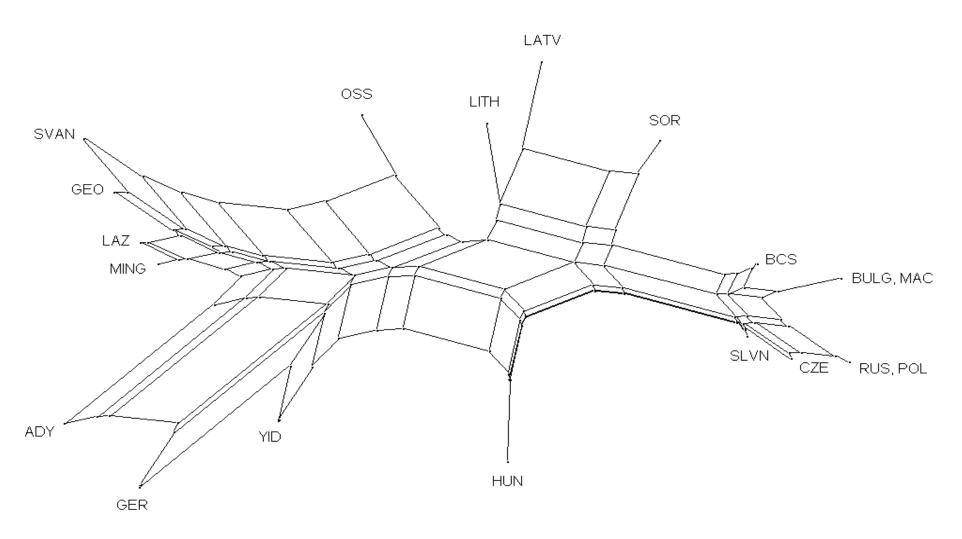

The productivity, frequency and functions of the Lithuanian -*inė*-formations await an unbiased empirical investigation.

- Unlike Slavic languages, Lithuanian allows (with a couple of strongly lexicalised exceptions) only one aspectual prefix per verb, thus lacking secondary perfectivisation.
- In this respect Lithuanian patterns with most other languages with prefixal perfectivisation.

Russian	Lithuanian
открыть 'open (pfv)' →	atidaryti →
<i>открывать</i> 'open (ipf)' →	atidar <mark>inė</mark> ti –/→
пооткрывать 'open a lot (pfv)'	*paatidarinėti

- Lithuanian has an inflectional future tense formed from all verbs regardless of "aspect" and lacks the futurate uses of the "perfective" present.
- In this respect it is different from the North Slavic and Kartvelian languages but patterns with both South Slavic languages and Latvian and Ossetic.

Arkadiev 2014, 2015: a multifactorial areal-typological approach to prefixal perfectivisation taking into account formal and functional properties of preverbs, prefixal verbs, and verbal systems.

 Lithuanian and Latvian stand apart from the fairly tight Slavic cluster, being close both to the Slavic "outsider" Colloquial Upper Sorbian, where the aspectual opposition has degrammaticalised under German influence (Breu 2000, 2012), and to Ossetic, which forms part of the Caucasian cluster of prefixal perfectivisation.

Bounder-based perfectives are not necessarily prefixal.

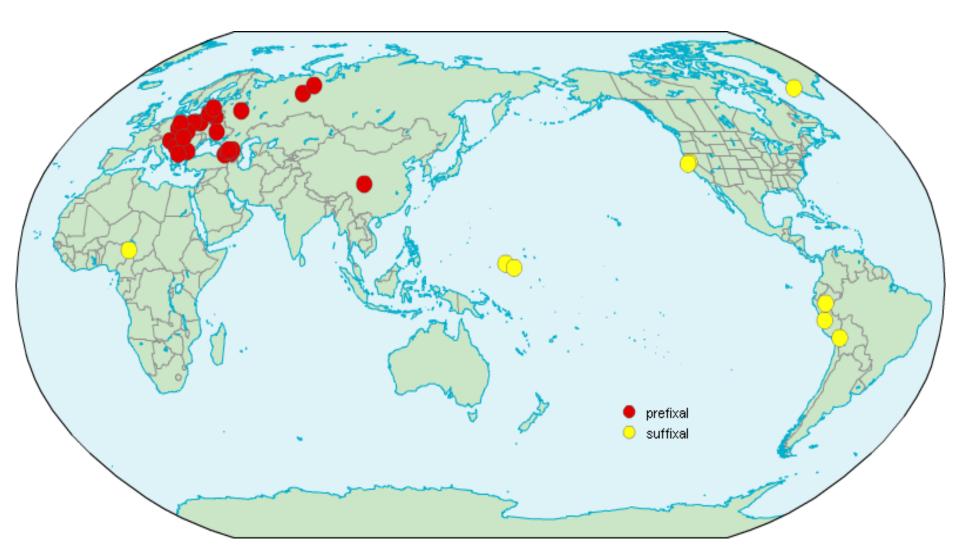

In many languages morphemes expressing spatial and aspectual modifications of verbal semantics are suffixal.

```
Margi (Chadic, Nigeria, Hoffmann 1963)

gù 'seek, look for (ipf)' →

gú-bá 'find out (pfv)'
```

**Aymara** (Aymaran, Bolivia, Haude 2003) sawu-ña 'weave (ipf)' → saw-su-ña 'finish weaving (pfv)'

 Derivational aspectual systems are not necessarily predominantly perfectivising, like Slavic and Baltic, but can be imperfectivising as well.
 (Arkadiev & Shluinsky 2015)

## Typology (2)

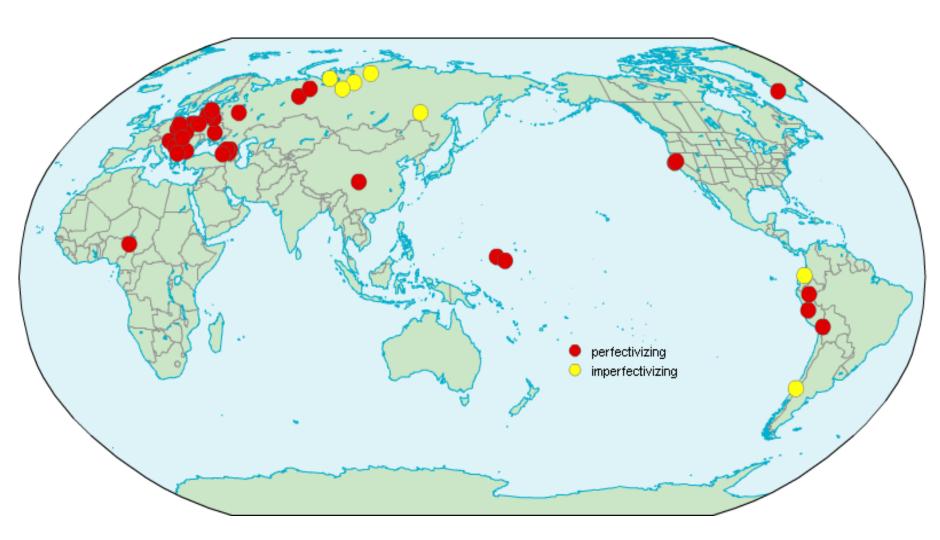

```
Enets (Samoyedic, Taymyr, Andrey Shluinsky's field materials)

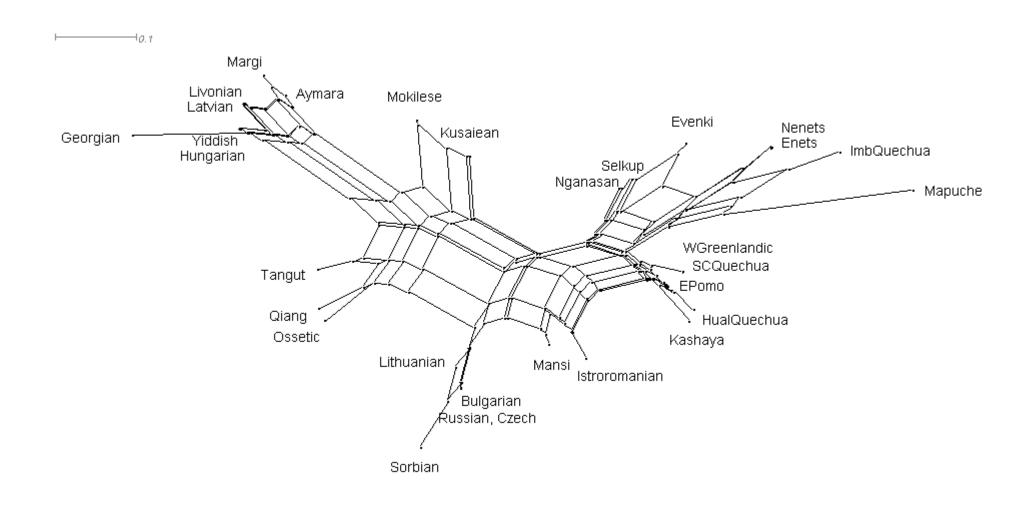

piri-? 'they cooked (pfv)' →

piri-goɔ 's/he is cooking (ipf)'
```

Mapuche (Araucanian, Chile, Smeets 2007) lüq-üy 'it became white (pfv)' → lüq-küle-y 'it is white (ipf)'

## Typology (2)

In the broader typology of derivational aspectual systems currently being developed (see Arkadiev & Shluinsky 2015), Lithuanian occupies a position close to Slavic and, notably, remote from Latvian.

Lithuanian	Latvian
both prefixal and suffixal perfectivisation	only prefixal perfectivisation
suffixal imperfectivisation, including secondary	no morphological imperfectivisation

- Are Lithuanian and Latvian so different?
- Probably not, but this depends on the typological parameters chosen, which, in turn, depend on the overall range of languages and phenomena surveyed.

#### Conclusions

Lithuanian (and Latvian) data are indispensable for the adequate typology of aspectual systems:

- for the understanding of possible correlations between different relevant parameters;
- from an areal and diachronic perspective.

#### Conclusions

- Typological approach can help refine the description of the Lithuanian aspectual system:
- more adequate characterisation of language-particular phenomena;
- formulation of questions in need of in-depth empirical studies.
